Projects

Gira 3D

March 2024 - Present

I founded and manage a sustainable design studio focused on hybrid product manufacturing through digital fabrication. I oversee the entire closed-loop production process, from eco-friendly product design to market entry strategy, ensuring a commitment to the circular economy. To create these high-quality consumer products, I utilize **3D printing (FDM)** and **CAD tools** to combine recycled plastics with reclaimed wood.

Experience

Farfetch

Porto

Software Integrations Engineer

March 2021 - May 2024

In this role, I focused on merging diverse systems and technologies to ensure cohesive functionality and high performance across a global e-commerce platform. I led complex integration projects aimed at maintaining a scalable and resilient infrastructure while optimizing system communication. My technical work was primarily centered on **Java, Spring Boot, Apache Camel, Kafka, Kubernetes, Microservices** and **RESTful APIs**.

ESAD

Porto

Backend Developer

September 2018 - March 2021

I collaborated with a specialized team to enhance and maintain the official web portal for the Superior School of Arts and Design. I focused on improving the user experience and resolving functional issues to support the digital operations of the school's community. My work involved using **Ruby, JavaScript, HTML, CSS, GCP** and various **Web Development** frameworks to ensure a stable and responsive interface.

Vodafone

Porto

Associate Professional

January 2018 - September 2018

Working on a large-scale international project, I developed and maintained robust backend services and microservices architectures for the telecommunications sector. I was responsible for improving system reliability and implementing modern monitoring solutions to ensure high availability. My core tech stack included **Docker, Microservices, Java, Prometheus, Grafana**, and **SQL**.

Celfocus

Porto

Associate Professional

February 2016 - January 2018

I began my professional career by developing Internet of Things (IoT) solutions to address complex industrial and operational challenges. I focused on building integrations and monitoring systems that provided better visibility and control over connected devices. During this period, I worked extensively with **Thingworx, Java, IoT protocols**, and **Linux systems**.
